This is the process that has been put together for the TAGA. Additionally, we are including an updated screening list. Please review and let us know if this will work.

Thanks.

DRAFT TAGA Screening Plan

If any benchmark is exceeded (short term AMCV)---- Hold position

If all readings exceed benchmark over 5 minute interval, then evaluate conducting area specific sampling.

If there are multiple exceedances in the 5 minute interval but not all samples exceed benchmarks, then TAGA will assist in identifying locations to isolate source(s). Refer results to division supervisor in coordination with EU and stakeholders to consider area specific evaluation.

TAGA suggested to evaluate stationary air sampling stations in order to isolate source. Evaluate potential for ASPECT assisting in isolating source.
